

Slide 1_X-ray imaging overview Radiography & Mammography:

X-ray imaging

page 2

History of X-ray

page 4

What is X-ray and X-ray tube?

page 6

Attenuation Coefficient

page 7

$$I = I_0 e^{(-\mu x)}$$

Page 8. Indirect exposure vs direct exposure

X-ray tube vs X-ray cone

Advantage and disadvantage of Computed Digital radiography

and digital

+ No maintenance of chemical use & dark room & storage space of films

+ Image processing capability

- Spatial resolution is a bit lower than analog film

- Contrast resolution is better than analog film

Dynamic Range (Analog Film)

Evaluate the film characteristic curve?

page 10

Dynamic Range (Digital Detector)

Digital Detector Characteristic Curve

page 11

Radiography (Rad)

What is Radiography?

page 12

Profile of General Radiography?

What Procedure, Reimb, Diseases, Challenges for Spine/head/neck/abdominal/thoracic/extremities and hip?

page 15

Radiography is used for?

page 16

Radiation Dose in X-Ray exams

page 18

What Effective radiation dose and comparable to natural background radiation for?

lượng độ radiation

Advanced Applications of X-ray

page 19

Dual Energy (two technologies, bone or soft-tissue images may be obtained...) / dose

page 20

Single exposure

bone, low energy; soft tissue high energy

page 21

Dual exposure

page 22

Auto Image Paste

page 23

Computer Aided Detection (CAD)

page 24

Clinical Performance Terms

page 27 - page 31

What is the percentage/the formula for estimating the Sensitivity, Specificity, positive/negative predictive value, accuracy?

What is P-value?

Dual energy -> subtract để lấy high energy và low energy
Sensitivity & specificity: bài toán phân loại giá trị nhị phân

$$\text{Sensitivity} = \frac{TP}{TP + FN}$$

$$\text{Specificity} = \frac{TN}{TN + FP}$$

Recall tên category (-)
lấy đúng

Radon transform

Temporal Subtraction (highlight change between previous and current, potential applications) page 34
 RAD Tomosynthesis (Goal, Acquisition,...) source change, 2 duty cycle page 35
 Radiography and Fluoroscopy (R&F) page 37 – 38

How many types of geometry? What is the major application? What substance is used?

Mammography

What is breast cancer?
 How many breast cancer types?
 Breast cancer statistics in 2013
 Breast imaging modalities
 What is mammography? Most common technology in mm? New technology?
 History + Sign of breast cancers
 How to procedure performed?

 page 53

Digital Breast Tomosynthesis (DBT)

SOTA of DBT reconstruction (advantage)

Slide 2_X-Ray CT Fundamentals 2021-2022:

- CT: Computed Tomography
- CAT: Computerized Axial Tomography
- CAT: Computer Assisted Tomography

Beer's law

page 9

Sinogram

Filtered Backprojection

Why iterative reconstruction?

What is CT system and component, X-ray tube?

Spatial resolution (How to increase spatial resolution by; Uniform spatial resolution; Boost

Spatial resolution and reduce aliasing artifacts by?

Temporal resolution (cardiac CT)

Image noise:

$$\sigma_p \sim \exp(p/2) / \sqrt{I_0} \cdot \text{resolution}^2$$

page 11

 page 36
 page 38

Slow-gantry cardiac CT

Multi-tube multi-detector CT (Benefit, challenges,...)

Multi-source inverse-geometry CT (X-ray source, detector, recon&cal)

Spectral CT ; Dual kVp CT

page 43
 page 46
 page 48
 page 53

Calculez les coefficients d'atténuation de l'objet dans l'exemple ci-dessous.

On utilise la formule:

$I = I_0 \exp(-\int \mu dx)$ (Calculer la surface)

$100 \exp(-3) = 100 \exp(-(\mu_{11} \cdot 1 + \mu_{12} \cdot 1))$

$\Rightarrow \mu_{11} + \mu_{12} = 3$

En pareil avec les autres dimension:

$\mu_{11} + \mu_{21} = 4$

$\mu_{21} + \mu_{22} = 4$

$\mu_{12} + \mu_{22} = 3$

$\Rightarrow \mu_{11}=1; \mu_{22}=1; \mu_{12}=2; \mu_{21}=3$

Stereo Vision Algorithms

- Definition of stereo vision
- Disparity and depth
- Stereo vision system
- + Problem

page 4

page 12

page 20

calibration (offline) / 21

rectification / 25

stereo correspondence / 26

triangulation / 27

+ Naive approach page 46-47

+ Fixed window page 55-57

1. les systèmes d'imagerie analogiques ont une meilleure résolution spatiale que les systèmes numériques:
 Vrai / 9
 Vrai: résolution numérique \rightarrow résolution dans les détecteurs numériques est limitée par la taille de pixel, dans l'analog \rightarrow pas notion de pixel, le film est continu / dépend on pixel size & pixel depth
2. Contrast resolution images analogiques > numérique Faux
 Intensity transfer function of analog is curve \Rightarrow trade off for short dynamic
 digital is linear \Rightarrow
3. les détecteurs image ^{numérique} ont une réponse linéaire \rightarrow vrai
